SpotLog

SpotLog is an app and website for Trainspotters that runs on Android smartphones iPhones and iPads. The SpotLog app allows you to record loco and unit numbers, keep a log of trains seen and mark the sightings off in the app's 'book' section. The SpotLog website includes a database of railway vehicles, including locomotives, carriages, multiple units, trams and metros. The data covers the UK and many European railway networks.

SpotLog data is maintained and updated by SpotLog users from many different data sources. SpotLog data is not official and makes no claims to accuracy. The data in the website and app is offered on face value. The SpotLog team makes every effort to keep the data accurate and up to date and accepts no liability for inaccuracies. We are always happy to receive corrections and updates through the SpotLog website or by email to updates@spotlog.org

<https://spotlog.org>

About this document

This PDF document was generated from the SpotLog database on 01/04/2026.

SpotLog data is regularly updated, check the website for latest data and updates.

UK: UK Mainline

This dataset is a fleet list for all locomotives and units running on UK mainlines from the year 2000 onwards.

The list includes UK mainline railway diesel and electric locomotives and multiple unit rolling stock.

This dataset does not include:

- Preserved locomotives and units (unless they ran on the mainline prior to preservation and since 2000)
- London Transport (TFL) units
- Trams or Preserved trams
- Coaching Stock
- Industrial Locomotives
- Narrow gauge stock, or Smaller gauge stock
- Departmental stock

See also UK70 for locomotives, railcars and unit from 1970-2000, and UKMISC for those random things that don't really belong in any of the main UK sets.

03

Class 03 Diesel Shunter

*John J Cordrey*

The British Rail Class 03 locomotive was, together with the similar Class 04, one of British Railways' most successful 0-6-0 diesel-mechanical shunters. 230 were built at Doncaster and Swindon works between 1957 and 1962, and were numbered D2000-D2199 and D2370-D2399 (later 03004 to 03399). D2370 and D2371 were used as departmental locomotives and originally numbered 91 and 92 respectively.

Most remaining examples are now in industrial use or preservation.

Gauge	1435mm
Builder	BR Swindon, Doncaster
Max Speed	28.5mph
Introduced	1957-61
Length	7920mm
Width	2590mm
Height	3720mm / 3610mm
Weight	30.7t
Engine	Gardner 8L3
Transmission	Diesel Mechanical
Power	152kW
TE	69.6kN
Driving Wheel Dia	1092mm
Wheelbase	2740mm
Wheel Arrangement	0-6-0
Withdrawn	2008

08

Class 08 Shunter Gronk

The British Rail Class 08 is a class of diesel-electric shunting locomotive built by British Railways (BR). As the standard BR general-purpose diesel shunter, the class became a familiar sight at major stations and freight yards. Since their introduction in 1952, however, the nature of rail traffic in Britain has changed considerably. Freight trains are now mostly fixed rakes of wagons, and passenger trains are mostly multiple units or have Driving Van Trailers, neither requiring the attention of a shunting locomotive. Consequently, a large proportion of the class has been withdrawn from mainline use and stored, scrapped, exported or sold to industrial or heritage railways.

As of 2020, around 100 locomotives remained working on industrial sidings and on the main British network. On heritage railways, they have become common, appearing on many of the preserved standard-gauge lines in Britain, with over 70 preserved, including the first one built.

Gauge	1435mm
Builder	BR Crewe, Darlington, Derby, Doncaster, Horwich
Max Speed	15/20mph
Introduced	1952-62
Length	8920mm
Width	2590mm
Height	3880mm / 3600mm (08/9)
Weight	50.4t - 51.8t
Engine	English Electric 6KT
Transmission	Diesel Electric
Power	261kW

08 e

Battery conversion of class 08 shunter

08e testing at Peak Rail

Dan Cardwell

The '08e' remains a Class 08. However, it is heavily modified and is fitted with modern 'plug-in' traction batteries and control equipment. The former contains battery cells, a battery management system and a battery charger. Up to six Lithium-Ferro-Phosphate 88kWh battery pods can be fitted to the locomotive.

The design is fully scalable with a range of battery configurations that are designed to meet the most demanding duty-cycles and power requirements. The cab modifications deliver all-round visibility while retaining the familiar Class 08 control desk. This reduces the driver and depot staff training time.

Shunter

There are cab enhancements including double-glazing, remote monitoring equipment and a roof-mounted heating, ventilation and air-conditioning unit.

Introduced	2023
Wheel Arrangement	0-6-0
Builder	Positive Traction
Power	450 HP
TE	45000 lbf
Transmission	EE506 Traction Motors
Max Speed	15mph

08 Hydro Shunter

Harrier Hydro Shunter Project

In 2021 the SVR teamed up with the University of Birmingham's Vanguard Sustainable Transport Solutions to work on the Harrier HydroSHUNTER project in Kidderminster TMD. This has seen the UK's first-ever conversion of a diesel locomotive to run with a replacement hydrogen-hybrid power pack, powered using a large traction battery, charged by a hydrogen fuel cell.

The original traction motors, and most of the auxiliary equipment, exhausters, compressors and the like have been retained. The kit is essentially designed to be plugged into the generator output, and through a series of controllers and voltage converters, replicate exactly what the generator would output with the given driver's input. It uses electrolysis to react hydrogen with oxygen, which generates an electric current, producing H₂O as the exhaust.

Introduced	2025

09

Class 09 Shunter Gronk

John J Cordrey

The British Rail Class 09 is a class of 0-6-0 diesel locomotive designed primarily for shunting and short-distance freight trips along branch lines.

The 26 locos are nearly identical to the more numerous Class 08 shunting locomotives but have different gearing, giving a higher top speed of 27.5 mph (44 km/h) at the expense of a lower tractive effort. They were introduced from 1959 to 1962 and latterly operated in the Southern Region of British Railways, although some of the class were originally allocated to depots in the Midlands and North. Further locomotives were converted from Class 08 in 1992 and, following this and privatisation in 1997, the class has been distributed much further afield.

Gauge	1435mm
Builder	BR Darlington, Horwich
Max Speed	27.5mph
Introduced	1959-62 (1992-93)
Length	8920mm
Width	2590mm
Height	3870mm
Weight	49.8t
Engine	English Electric 6KT
Transmission	Diesel Electric
Power	261kW
TE	111.2kN
Driving Wheel Dia	1372mm
Wheelbase	3510mm

18

Class 18 Hybrid Battery locomotive

The British Rail Class 18 is a class of hybrid locomotives designed and built by the British railway locomotive manufacturer Clayton Equipment Company in Burton upon Trent, Staffordshire. It has also been referred to as the CBD90 Hybrid by Clayton and private railway customers.

The Class 18 was first revealed as the CBD90 during mid-2019; initial customers were typically operators of private railways, such as steelworks and nuclear power plants. In May 2020, the type was ordered by the rolling stock leasing company Beacon Rail, it has been envisioned as a successor to the 1950s era Class 08 and Class 09 shunters. The Class 18 is primarily battery-powered, being recharged either via track-side mains power supplies,

Shunter

regenerative braking, or its onboard diesel generator. A three-month trial using the first example of the type was conducted by the train operator GB Railfreight during early 2022.

97/6

Class 97/6 Ex BR Departmental PWM Shunters

97651, Radyr, 1982

Phil Richards

The British Rail Class 97/6 0-6-0 diesel shunting locomotives were purpose-built for departmental duties by Ruston & Hornsby at Lincoln in 1953 (97650) or 1959 (97651-654). There are minor technical differences between 97650 and the 1959 batch.

This class of five locomotives is outwardly similar to the Class 04 diesels built around the same time, but internally they are quite different. The Class 97/6 is diesel-electric, while the Class 04 is diesel-mechanical.

The Class 97/6 is related to the older British Rail Class D1/3, which was a 0-4-0 diesel-mechanical version of the Ruston & Hornsby 165DE. All existing now preserved.

Gauge	1435mm
Builder	Ruston

Diesel Loco

19

Former Mark 3 DVT. Experimental conversion to test hydrostatic transmission.

Class 19 is the name given to an experimental railway locomotive that was constructed using a Mark 3 DVT. The locomotive is part of a project funded by the Rail Safety and Standards Board to test the viability of combining hydrostatic transmission with a form of regenerative braking that can reduce engine emissions.

Hydrostatic transmissions have been used previously for rail vehicles, but only for slow-speed track maintenance vehicles and similar, not for mainline locomotives. Diesel-hydraulic locomotives instead use a hydrodynamic, i.e. torque converter, transmission.

Length	18.83m

20

English Electric Type 1

The British Rail Class 20, otherwise known as an English Electric Type 1, is a class of diesel-electric locomotive. In total, 228 locomotives in the class were built by English Electric between 1957 and 1968, the large number being in part because of the failure of other early designs in the same power range to provide reliable locomotives.

The locomotives were originally numbered D8000–D8199 and D8300–D8327. They are known by railway enthusiasts as "Choppers"

Unusually for British designs, the locomotive had a single cab. This caused serious problems with visibility when travelling nose first, though in these circumstances the driver's view is comparable to that on the steam locomotives that the Class 20s replaced. It was common, however, to find Class 20s paired together at the nose, with their cabs at opposite ends, ensuring that the driver could quite clearly see the road ahead, and a guard can watch the train from the other locomotive without the need for a brakevan.

Now mostly in private use or preservation

Vossloh G1206 & G1200 / Class 21/5 & 21/6

The second use of the TOPS classification Class 21 for locomotives used on the British railway network came through the use of a number of related diesel-hydraulic and diesel-electric locomotives procured following the opening of the Channel Tunnel. The total of 16 locomotives were obtained by two separate operators, with some used for freight, and others to propel service trains and as "Thunderbird" locomotives.

In 2005, Euro Cargo Rail (ECR) was formed as a freight operator in France by English, Welsh and Scottish Railway (EWS). Its initial operations were carried out by a quartet of Vossloh G1206 diesel-hydraulic locomotives. Although these locomotives were intended for use in France, maintenance was planned to be carried out at EWS's depot at Dollands Moor, close to the Eurotunnel terminal at Cheriton. Because the locomotives would be operating on railways in Great Britain, they were allocated numbers in the TOPS system as Class 21. Two similar G1000 locomotives were procured in 2007.

Wheel Arrangement	B-B (H)
Length	14.7m / 14.09m
Width	3.3m
Height	4.8m
Introduced	2005-6

31

Ex BR mixed traffic type 2.

The British Rail Class 31 diesel locomotives, also known as the Brush Type 2 and previously as Class 30, were built by Brush Traction from 1957-62. They were numbered in two series, D5500-D5699 and D5800-D5862. Construction of the first locomotive was completed in the final week of September 1957, and the handing-over took place on 31 October. The first Class 31 entered service in November 1957, after the launch of the Class 20 locomotive and

Diesel Loco

was one of the Pilot Scheme locomotives ordered by British Railways to replace steam traction.

Now in private use or preservation.

Class 33 Crompton

John J Cordrey

The British Rail Class 33, also known as the BRCW Type 3 or Crompton, is a class of Bo-Bo diesel-electric locomotives, ordered in 1957 and built for the Southern Region of British Railways between 1960 and 1962.

They were produced as a more powerful Type 3 (1,550 bhp) development of the 1,160 bhp Type 2 Class 26. This was achieved, quite simply, by removing the steam heating boiler and fitting a larger 8-cylinder version of the previous 6-cylinder engine. This was possible because of the traffic requirements of the Southern Region: locomotive-hauled passenger traffic depended on seasonal tourist traffic and was heavier in the summer, when carriage heating was not needed. In the winter, their expected use was to be for freight. Thus, they became the most powerful BR Bo-Bo diesel locomotive

33/1

33116 at Windsor & Eton - 10 December 1989

Neil Thaler

The British Rail Class 33/1 locomotives are nicknamed "Bag Pipes". This nickname specifically refers to the Class 33/1 locomotives that were fitted for push-pull working and featured air pipes under the cab windows, resembling bagpipes. They were also known more generally as "Cromptons", due to the Crompton Parkinson electrical equipment they used.

37

Class 37 Tractor

35057 at Barton Under Needwood

Dan Cardwell

The British Rail Class 37 is a diesel-electric locomotive. Also known as the English Electric Type 3, the class was ordered as part of the British Rail modernisation plan. They were numbered in two series, D6600–D6608 and D6700–D6999.

The Class 37 became a familiar sight on many parts of the British Rail network, in particular forming the main motive power for InterCity services in East Anglia and within Scotland. They also performed well on secondary and inter-regional services for many years. The Class 37s are known to some railway enthusiasts as "tractors", a nickname given due to the similarities between the sound of the Class 37's engine and that of a tractor.

40

Class 40 Whistler

The British Rail Class 40 is a type of British railway diesel electric locomotive. A total of 200 were built by English Electric between 1958 and 1962. They were numbered D200-D399. They were, for a time, the pride of British Rail's early diesel fleet. However, despite their initial success, by the time the last examples were entering service they were already being replaced on some top-level duties by more powerful locomotives. As they were slowly relegated from express passenger uses, the type found work on secondary passenger and freight services where they worked for many years. The locomotives were commonly known as "Whistlers" because of the distinctive noise made by their turbochargers. The final locomotives ended regular service in 1985, although several examples are preserved.

Length	21.18m
Width	2.74m
Height	3.91m
Introduced	1958
Withdrawn	1988
Wheel Arrangement	1Co-Co1

Diesel Loco

Builder	English Electric
Power	1490kW
Weight	135t
TE	231kN
Engine	EE 16SVT
Transmission	Diesel-Electric
Max Speed	90 mph
Driving Wheel Dia	1.143m
Wheelbase	18.67m

43

High Speed Train

The British Rail Class 43 (HST) is the TOPS classification used for the InterCity 125 High Speed Train (formerly classes 253 and 254) power cars, built by British Rail Engineering Limited from 1975 to 1982, and in service in the UK since 1976. The class is officially the fastest diesel locomotive in the world, with an absolute maximum speed of 148.5 mph (239.0 km/h), and a regular service speed of 125 mph (201 km/h). The record run was led by 43102 (43302) and trailed by 43159.

Diesel Loco

HST train sets were first introduced in 1976 for Western Region services out of Paddington, followed by ECML services from Kings Cross. Now replaced on these services by class 80x units.

Builder	BREL Crewe
Max Speed	125mph
Introduced	1975
Transmission	Diesel-Electric
Power	1678kW
TE	80kN
Wheel Arrangement	Bo-Bo

Class 45 Peak

45118 at The Greatest Gathering

Dan Cardwell

The British Rail Class 45 or Sulzer Type 4 are diesel locomotives built by British Railways' Derby and Crewe Works between 1960 and 1962. Along with the similar Class 44 and 46 locomotives, they became known as Peaks. The Class 45s became the main traction on the Midland Main Line from 1962, and their introduction allowed considerable acceleration of the previous steam-powered service.

The Class 45s remained the main source of power on the Midland Main Line up to 1982, when they were relegated to secondary services following introduction of HSTs on the route. From 1986 Class 45s virtually disappeared from the line and all were withdrawn by the end of 1989. All remaining survivors now preserved.

ex BR mixed traffic Type 4 Diesel Electric loco

47739 at Alstom Derby 2025

Dan Cardwell

The British Rail Class 47 or Brush Type 4 is a class of diesel-electric locomotive that was developed in the 1960s by Brush Traction. A total of 512 Class 47s were built at Brush's Falcon Works in Loughborough and at British Railways' Crewe Works between 1962 and 1968, which made them the most numerous class of British mainline diesel locomotive.

Diesel Loco

They were fitted with the Sulzer 12LDA28C twin-bank twelve-cylinder unit producing 2,750 bhp (2,050 kW) – though this was later derated to 2,580 bhp (1,920 kW) to improve reliability – and have been used on both passenger and freight trains on Britain's railways for over 55 years.

Despite the introduction of more modern types of traction, a significant number are still in use, both on the mainline and on heritage railways. At least 31 class 47's have been preserved. 33 further locomotives were converted to Class 57s between 1998 and 2004.

50

Class 50 Hoover

Dan Cardwell

The British Rail Class 50 is a class of diesel locomotives designed to haul express passenger trains at 100 mph (160 km/h). Built by English Electric at the Vulcan Foundry in Newton-le-Willows between 1967 and 1968, the Class 50s were initially on a 10-year lease from English

Diesel Loco

Electric Leasing, and were employed hauling express passenger trains on the, then non-electrified, section of the West Coast Main Line between Crewe and Scotland.

Initially numbered D400–D449 and known as English Electric Type 4s, the locomotives were purchased outright by British Rail (BR) at the end of the lease and became Class 50 in the TOPS renumbering of 1973. All remaining examples are now preserved

52

Class 52 Western

1/8/25 the Greatest Gathering

By Thomas Harley

The British Rail Class 52 is a class of 74 Type 4 diesel-hydraulic locomotives built for the Western Region of British Railways between 1961 and 1964. All were given two-word names, the first word being "Western" and thus the type became known as Westerns. They were also known as Wizzos and Thousands. All remaining examples now preserved.

55

Class 55 Deltic

Dan Cardwell

The British Rail Class 55, also known as a Deltic, or English Electric type 5, is a class of diesel locomotive built in 1961 and 1962 by English Electric for British Railways. They were designed for the high-speed express passenger services on the East Coast Main Line (ECML) between Edinburgh and London King's Cross.

They gained the name "Deltic" from the prototype locomotive, DP1 Deltic (the running number DP1 was never carried), which in turn was named after its Napier Deltic power units. At the time of their introduction into service, the Class 55s were the most powerful single-unit diesel locomotives in the world, with a power output of 3,300 hp. They had an official maximum speed of 100 miles per hour, however this was frequently exceeded, especially in their later years of service, with speeds of up to 117 miles per hour, being recorded on level gradients, and up to 125 miles per hour whilst descending Stoke Bank.

Twenty-two locomotives were built, which were used for express passenger services on the ECML, particularly from London to Leeds and Edinburgh. From 1978 the "InterCity 125" High Speed Trains (HSTs) were introduced, and the Deltics were subsequently relegated to semi-fast services on the Kings Cross to York, Edinburgh and Hull routes and continued on sleeper services along the ECML. All were withdrawn from service between January 1980 and December 1981. All remaining examples now preserved.

56

ex BR heavy freight type 5 loco

The British Rail Class 56 is a type of diesel locomotive designed for heavy freight work. It is a Type 5 locomotive, with a Ruston-Paxman power unit developing 3,250 bhp (2,423 kW), and has a Co-Co wheel arrangement. Enthusiasts nicknamed them "Gridirons" (or "Grids" for short), due to the grid-like horn cover on the locomotive's cab ends fitted to nos. 56056 onwards.

The Class 56 fleet was introduced between 1976 and 1984, a total of 135 examples were manufactured. The first 30 locomotives (56001 - 56030) were built by Electroputere in Romania, but these typically suffered from poor construction standards and many were withdrawn from service early for extensive rebuilding before re-entering revenue service. The remaining 105 locomotives were built by British Rail Engineering Limited (BREL) at Doncaster Works (56031 to 56115) and Crewe Works (56116 to 56135).

In April 2019, GBRf announced that several Class 56 locomotives would be rebuilt as Class 69s by Progress Rail at its Longport facility. The rebuild scheme involves the replacement of the original Ruston-Paxman RK3 engine with the EMD 710 powerplant, while newer electronic control systems based on those present on the Class 66 were also installed. While the external appearance and many elements were retained, much of the internal systems were replaced with those sourced from the Class 66.

Surviving examples in private use or preservation.

57

Ex BR Class 47. Reengined 1998-2004.

John J Cordrey

The British Rail Class 57 is a type of diesel locomotive that was remanufactured from Class 47s by Brush Traction of Loughborough between 1998 and 2004 and was produced in response to an order placed in November 1997 by the recently privatised freight operator Freightliner.

The company sought to have its aging Class 47s, some of which had become increasingly unreliable and uncompetitive in comparison to new-build counterparts, rebuilt. Accordingly, redundant locomotives were handed over to Brush, where they were fitted with re-conditioned Electro-Motive Diesel engines and the same model of traction alternator as that fitted to the Class 56 heavy freight locomotive.

As a result of this scheme, improved reliability and performance was recorded; Freightliner placed multiple follow-on orders for more to be rebuilt, as would other operators. However, Freightliner abandoned its long-term plans to acquire twenty-five Class 57s in favour of new-built Class 66 locomotives instead.

58

Ex BR type 5 Freight locomotive.

John J Cordrey

The British Rail Class 58 is a class of Co-Co diesel locomotive designed for heavy freight. The narrow body with cabs at either end led to them being given the nickname "Bone" by rail enthusiasts.

Their design represented a major departure from British conventions of construction; amongst the innovations was the adoption of the American practice of modularisation. The first locomotive of the class was delivered to British Rail during early 1983 and entered service that same year. Despite expectations of a lengthy service life, during 2002, EWS decided to withdraw all examples of the type after only 19 years in service. Subsequently, 32 were hired abroad – four to the Netherlands, eight to Spain and twenty to France. A few examples have also been scrapped or have entered preservation. Most examples in storage in France/Spain.

60

Brush type 5 heavy freight loco

The British Rail Class 60 is a class of Co-Co heavy freight diesel-electric locomotives built by Brush Traction. They are nicknamed Tugs by rail enthusiasts. During the 1980s, it became increasingly apparent that British Rail required a more capable Type 5 locomotive for its heavy freight trains. Dissatisfaction with the British Rail Class 56's reliability led to the stipulation of a 95 percent availability, a stringent requirement at the time. A total of three bids were received to a competitive tender issued on 10 August 1987; of these, Brush Traction's submission was selected and an order for 100 locomotives was issued during the following year. Despite the first example being completed during June 1989, due to a number of technical issues discovered during testing, the first examples of the Class 60 would not enter revenue service until late 1990.

Operated only during the final years of British Rail, the entire Class 60 fleet became the property of English Welsh & Scottish (EWS) following the privatisation of British Rail during the mid 1990s. While the company was reportedly unimpressed by the type's performance, it was retained for heavy freight duties while much of the fleet was stored and subsequently sold on to other operators. Between 2004 and 2007, typically between 50 and 75% of the fleet would be out of action at a given time. However, during November 2010, EWS's successor, DB Schenker, announced that a portion of the fleet would be overhauled, referring to such units as Super 60s and extending their service life through to around 2025. Not all Class 60s received such overhauls however. During 2020, a Class 60 became the first example of the type to be scrapped, while another became the first to be preserved.

66

General purpose freight loco from GM-EMD

The Class 66 is a type of six-axle diesel-electric freight locomotive developed in part from the Class 59, for use on UK railways. Since its introduction the class has been successful and has been sold to British and other European railway companies. In Continental Europe it is marketed as the EMD Class 66 (JT42CWR).

Builder	EMD
Max Speed	75mph
Introduced	1998
Length	21.4m
Weight	142.9t
Engine	EMD 12N
Transmission	Diesel-Electric
Power	2460kW
TE	260kN (cont)
Driving Wheel Dia	1066mm
Wheel Arrangement	Co-Co

EMD Class 67

67005 at The Greatest Gathering

Dan Cardwell

The Class 67 locomotives are a class of Bo-Bo diesel-electric locomotives that were built for the English Welsh & Scottish Railway between 1999 and 2000 by Alstom at Meinfesa in Valencia, Spain with drive components (engine, generator and traction motors) from General Motors' Electro-Motive Division. EMD's designation for this locomotive type is JT42HW-HS

The bodyshell is a monocoque load-bearing Alstom design, the bogies are an "H" frame Alstom design, the engine, traction motors and control electronics are GM-EMD products, and the same as used in the Class 66. Unlike the Class 66, the traction motors are frame mounted rather than axle hung to reduce unsprung mass and the gear ratio is increased allowing higher speeds. The cab design has a central driving position.

The locomotives are able to provide Electric Train Supply for passenger train heating and air-conditioning and are equipped for both buffers and chain couplers and buckeye couplers, the latter attached by a swing arm mount.

Vossloh Bo-Bo diesel electric locomotives

John J Cordrey

The Class 68 is a type of mainline mixed traffic diesel-electric locomotive manufactured by Stadler Rail Valencia (and previously by Vossloh España) for Direct Rail Services (DRS) in the United Kingdom. The design is derived from the Stadler Eurolight, and Stadler's product name for this variant is the UKLight.

Rebuild of Class 56

69001 at Clapham Junction

Neil Thaler

The British Rail Class 69 is a class of diesel locomotives which are converted from Class 56 locomotives. The conversion work is performed by Progress Rail at their workshop in Longport.

The Class 69 was developed to fulfil the needs of the rail freight operator GB Railfreight, which was unable to purchase additional Class 66 diesel locomotives yet sought more capacity in a similar performance band. The conversion of surplus Class 56s, which were available in sufficient quantity and in good enough condition to make the class a good candidate for the project, proved to be a desirable option, being more affordable than new build locomotives while achieving similar performance to the Class 66 post-conversion. Many of the new systems installed are similar, or identical, to those present on the Class 66, including its EMD 710 powerplant and associated control systems; this was a deliberate choice in order to maximise the performance similarities. Retained elements were refurbished to an as-new condition. Original frame, body and bogies retained, new engines, compressors and electronics fitted.

GE designed 'PowerHaul' freight loco

John J Cordrey

The British Rail Class 70 is a Co-Co mainline freight GE PowerHaul locomotive series manufactured by General Electric in Erie, Pennsylvania, United States. They are operated in the United Kingdom by Freightliner and Colas Rail. These locomotives replaced the Class 59 as having the highest tractive effort of any Co-Co Diesel locomotive in use in the United Kingdom when they were introduced.

73

Bo-Bo (ED/DC)

The Greatest Gathering

Dan Cardwell

The British Rail Class 73 is a British electro-diesel locomotive. The type is unusual in that it can operate from the Southern Region's 650/750 V DC third-rail or an on-board diesel engine to allow it to operate on non-electrified routes. This makes it very versatile, although the diesel engine produces less power than is available from the third-rail supply so the locomotives are rarely operated outside of the former Southern Region of British Rail.

Following the withdrawal and scrapping of the more powerful Class 74 electro-diesels in 1977, the Class 73 was unique on the British railway network until the introduction of the Class 88 electro-diesels in 2017. Ten locomotives have been scrapped. Since privatisation, the Class 73 fleet has been reduced in size following the large-scale withdrawals of the EWS and Gatwick Express fleets. However, many smaller operators have acquired locomotives, so their continued use is assured for the foreseeable future.

86

Bo-Bo (AC)

The Greatest Gathering

Dan Cardwell

The British Rail Class 86 is the standard electric locomotive built during the 1960s. One hundred of these locomotives were built from 1965 to 1966, either by English Electric at Vulcan Foundry, Newton-le-Willows or British Rail (BR) at their Doncaster works. The class was built to haul trains on the then newly electrified West Coast Main Line (WCML) from London Euston to Birmingham, Crewe, Liverpool, Manchester and later Glasgow and Preston.

Introduction of the class enabled the replacement of many steam locomotives, which were finally withdrawn by British Rail in 1968. Under the earlier BR classification system, the type was given the designation AL6 (meaning the sixth design of AC locomotive) and locomotives were numbered E3101-E3200. In 1968, this was changed to Class 86 when British Rail introduced the TOPS classification system.

Electric Loco

The class was built to haul passenger and freight trains alike on the West Coast Main Line, however some members of the class also saw use on the Great Eastern Main Line (GEML) between London Liverpool Street and Norwich, after that line was also electrified in the mid-1980s. The type has had a generally long and successful career, with some members of the class seeing main line service lives in the UK of up to 55 years. Most regular passenger duties of the class came to end on both the WCML and the GEML in the early-to-mid-2000s, after a career of up to 40 years. Some members of the class remained in use for charter work and for freight work with Freightliner until 2021. A number of the class were exported to Bulgaria and Hungary and remain in use. As of 2022 three Class 86s remain preserved in usable condition in the UK, all in private ownership.

87

Class 87

John J Cordrey

The British Rail Class 87 is a type of electric locomotive designed and built by British Rail Engineering Limited (BREL) between 1973 and 1975. A total of thirty-six locomotives were constructed, to work passenger and freight services over the West Coast Main Line (WCML).

Electric Loco

The type was developed in response to the need to add extra capacity to the electric traction fleet operated by British Rail (BR), in addition to the desire to introduce a higher performance electric locomotive than the existing Class 86, numerous aspects of which being incorporated into its design. The Class 87 fleet was operated as the flagships of British Rail's electric locomotive fleet until the late 1980s, at which point the Class 90, an improved derivative of the Class 87, started to come on stream.

As a consequence of the privatisation of British Rail during the mid 1990s, all but one of the Class 87s were transferred to Virgin Trains. Under this operator, the type continued their passenger duties until the advent of the new Class 390 Pendolinos, after which they were gradually transferred to other operators or withdrawn between 2002 and 2007. For a time, the type was a staple of electrified freight operations, before it was displaced by the Class 90 in this capacity as well. By the end of the 2010s, there was only one Class 87 that remained in an operational condition in Britain, 87002, which had been initially preserved by the AC Locomotive Group and is presently owned by Locomotive Services Limited. It was previously in use with Serco Caledonian Sleeper and is intended for use on charter services. A large proportion of the fleet has been exported to Bulgaria, where they have entered regular use once again.

Gauge	1435mm

Vossloh Bo-Bo electro-diesel locomotives

Philip A Hayward

The British Rail Class 88 is a type of mainline mixed traffic electro-diesel locomotive manufactured by Vossloh España/Stadler Rail Valencia for Direct Rail Services in the United Kingdom. The locomotive is part of the Stadler Euro Dual family. It is the first dual-mode locomotive in the UK to use the 25 kV AC electrification.

Amid the fulfilment of DRS' order for the Class 68, Vossloh's team proposed the development of a dual-mode locomotive that could be alternatively powered by an onboard diesel engine or via electricity supplied from overhead lines (OHLE). Having been impressed by the concept, DRS opted to place an order for ten Class 88s during September 2013. Having been developed alongside the Class 68, considerable similarities are shared between the two locomotives, amounting to roughly 70 per cent of all components being shared.

Builder	Vossloh/Stadler
Introduced	2015-16
Length	20.50m
Width	2.69m
Wheel Arrangement	Bo-Bo
Power	708kW (diesel) 4000kW (electric)
Weight	85tonnes
TE	371kN
Engine	CAT C27 12cyl
Transmission	Electric
Max Speed	100mph
Driving Wheel Dia	1100mm

89

Brush designed prototype express passenger loco

John J Cordrey

The British Rail Class 89 is a prototype electric locomotive. Only one was built, in 1986, by British Rail Engineering Limited's Crewe Works. It was used on test-trains on both the West Coast and East Coast Main Lines. The locomotive was fitted with advanced power control systems and developed more than 6,000 bhp (4,500 kW). After being withdrawn in 1992, it was returned to service in 1996, before being again withdrawn in 2000.

The Class 89 locomotive was designed by Brush Traction, Loughborough to meet a specification issued by British Rail. BR subsequently changed the requirements of this specification, but not before Brush had committed to building the prototype locomotive.

Electric Loco

The locomotive had six DC traction motors. The main armature current for all the motors was fed from a common thyristor drive, with each motor having an independent field current controller. The field current controllers comprised a two quadrant chopper inside a thyristor bridge. The bipolar transistor based choppers provided a fast fine control of motor torque for electric braking and slip control, while the thyristor bridge was used to invert the field current polarity.

Gauge	1435mm
Builder	BREL Crewe

90

BR Class 90

The British Rail Class 90 electric locomotives were built for mixed-traffic duties, operating from 25 kV AC overhead lines and produce 5,000 bhp. They weigh 84.5 tonnes and can typically achieve a top speed of 110 mph.

The Class 90 is a modernised derivative of the preceding Class 87 locomotive, having been originally designated as the Class 87/2. During the 1980s, British Rail Engineering Limited had submitted an offer to build 25 examples to replace various aging electric locomotives, including the Class 81, Class 82, Class 83, Class 84 and Class 85. It was selected over numerous rival proposals, including the InterCity 225 and the Class 89; the type was manufactured by BREL at Crewe Works between 1987 and 1990.

The Class 90 was introduced to service during the closing years of British Rail, being used for both passenger services and freight trains alike. Following the privatisation of British Rail, the type has served with various operators, including Greater Anglia, Virgin Trains and GNER; it was, however, displaced largely from regular passenger services during the 2000s and 2010s. Presently, Class 90 locomotives are usually employed on heavy freight trains and occasional charter services.

91

Class 91 Electra

Phil Hayward

The British Rail Class 91 is a high-speed electric locomotive, which produces power of 4,830 kW (6,480 hp); it was ordered as a component of the East Coast Main Line modernisation and electrification programme of the late 1980s.

The Class 91s were given the auxiliary name of InterCity 225 to indicate their envisaged top speed of 225 km/h, they were also referred to as Electras by British Rail during their development and throughout the electrification of the East Coast Main Line.

The other end of the InterCity 225 train set is formed of a Mark 4 Driving Van Trailer, built with a similar body shell to the Class 91 locomotives but with only one driving cab. The locomotive body shells are of all-steel construction. Unusually, the motors are body mounted and drive bogie-mounted gearboxes via cardan shafts; this reduces the unsprung mass and hence track wear at high speeds. The locomotive also features an underslung transformer; therefore, the body is relatively empty compared to contemporary electric locomotives. Much of the engineering specification for the locomotive was derived from the research and operational experience of the APT-P.

31 were built in total. Some locos are still in use; however, several have already been scrapped, many more have been placed in store. Upon retirement, 91110, 91111, and 91131 will be preserved as part of the National Collection, having all been nominated by the Railway Heritage Committee. In June 2021, the '225 Group' was launched; a preservation initiative with the intention of preserving a further Class 91 and an InterCity 225 set. In September 2022, Crewe Heritage Centre received 91120 on long-term loan from Europheonix.

Class 92

The British Rail Class 92 is a dual-voltage electric locomotive which can run on 25 kV AC from overhead wires or 750 V DC from a third rail. It was designed specifically to operate services through the Channel Tunnel between Britain and France. Eurotunnel indicates the Class 92 locomotive as the reference for other locomotives which railway undertakings might want to get certified for usage in the Channel tunnel.

System	25kV AC Overhead / 750V DC 3rd Rail
Wheel Arrangement	Co-Co
Gauge	1435mm
Builder	Brush Traction

Multi-Mode Loco

93

Tri-Mode Electric Locos

Phil Hayward

The British Rail Class 93 is a tri-mode locomotive built by Stadler Rail in Valencia. It is an evolution of the Class 88 bi-mode locomotive, which was built by Stadler for Direct Rail Services. Three different power sources are used to power the locomotive – 4,000kW 25 kV AC overhead electric power, or a 900kW diesel engine supplemented by a 400kW battery – allowing the locomotive to be used on both electrified and non-electrified lines.

The British Rail Class 99 is a class of dual-mode electro-diesel Co-Co locomotives that will haul freight trains on both electrified and non-electrified lines. It is based on the Stadler Euro Dual platform. Able to reach speeds of up to 75 mph, the powerful machines can run on 25 kV AC electrified lines with a power of 6,000 kW at wheel. In addition, they feature a high-power low-emissions Stage-V engine allowing operations on non-electrified lines.

The locomotives are expected to enter service in 2025 and will most likely be first used for intermodal work on the West Coast and East Coast mainlines. They will be maintained by Stadler at a new facility in Leicester

Diesel Unit

121

Class 121 Pressed Steel Bubble Car

John J Cordrey

The British Rail Class 121 is a single-car double-ended diesel multiple unit. 16 driving motor vehicles were built from 1960, numbered 55020–55035. These were supplemented by ten single-ended trailer vehicles, numbered 56280–56289 (later renumbered 54280–54289). They have a top speed of 70 mph, with slam-doors, and vacuum brakes. The driving motor vehicles were nicknamed "Bubble Cars" by some enthusiasts (a nickname endorsed and made official by final passenger service operator Chiltern Railways).

The Class 121 is Britain's longest serving DMU, operating in passenger service for 57 years until 2017.

14 vehicles have been preserved

Gauge	1435mm

142

Class 142 Pacer

The British Rail Class 142 diesel multiple unit passenger railbuses were built for British Rail from 1985 to 1987. The class were built with a high level of commonality with the widely used Leyland National bus. They are part of the Pacer family of railbuses. The last set was withdrawn from service in 2020.

The Class 142 shared a high degree of similarity to the design of the Class 141. However, one major area of change is that both the Class 142 and Class 143 featured a noticeably wider body, instead of adhering to the width of the standard bus as per the Class 141; specifically, the width was expanded to the maximum amount permissible to remain within the loading gauge. This resulted in an increased internal area to accommodate passengers within, enabling a three-by-two seating arrangement to be installed for a total maximum capacity of 121 seats per set. The increased seating was particularly useful as, in addition to their use on rural feeder services, the Class 142's use on short range urban services had been foreseen by BR planners.

143

Class 143 Pacer

Paul Furse

The British Rail Class 143 is a diesel multiple unit railbus, part of the Pacer family of passenger trains introduced between 1985 and 1986.

Diesel Unit

During the 1980s, British Rail (BR) was interested in replacing its first-generation diesel multiple units, particularly in the use of railbuses to service its lightly used branch lines. It was decided to develop such a vehicle with a high level of commonality with the widely used Leyland National bus, leading to its modular design serving as the basis for the design. Several single and two-car prototypes were constructed and evaluated, leading to an initial production batch by British Leyland, designated as the Class 141 units. BR, seeking to procure improved derivatives of the Class 141, placed an order with the manufacturers Hunslet-Barclay and Walter Alexander to construct its own variant, the Class 143.

Entering operational service during the mid-1980s, the Class 143 embodied several advances over the original model in terms of ride quality and reliability. During its operating lives, the type was tasked with various passenger services across the United Kingdom; being initially operated in the North-East of England, all units were subsequently transferred to other regions, including Wales and South-West England.

144

Class 144 Pacer

The British Rail Class 144 Pacer was a diesel multiple unit (DMU) passenger train built at Derby between 1986 and 1987. BR, seeking to procure improved derivatives of the earlier Class 141, placed an order with the manufacturers British Rail Engineering Limited (BREL) and Walter Alexander to construct their own variant, the Class 144. A total of 23 units were constructed.

All units have now retired from mainline service, though a significant proportion have been acquired for preservation on heritage railways and in other uses. 19 out of the 23 units have been purchased following withdrawal for this purpose, of which 15 units are in operational condition.

155

Class 155 Super Sprinter

Paul Furse

The British Rail Class 155 is a diesel multiple unit passenger train. These DMUs were built by Leyland Bus at Workington (incorporating some Leyland National bus components) between 1987 and 1988 as part of BR's replacement of its ageing first-generation diesel fleet. 42 units were originally built, of which only 7 remain; the other 35 units were converted to Class 153 railcars.

Formation	DMSL-DMS
Length	23.208m

Diesel Unit

Width	2.700m
Height	3.746m
Introduced	1988
Wheel Arrangement	2B+B2
Builder	Leyland Bus
Power	430 kW
Weight	38.8t / 37.9t
Engine	2 × Cummins NT855-R5 (one per vehicle)
Transmission	Voith T211 r (hydrokinetic) (one per vehicle)
Max Speed	75 mph
Wheelbase	16m
Bogies	2.6m
Seats	80+80

156

Class 156 Super Sprinter

The British Rail Class 156 Super Sprinter is a diesel-hydraulic multiple unit passenger train. A total of 114 sets were built between 1987 and 1989 for British Rail by Metro-Cammell's Washwood Heath works. They were built to replace elderly first-generation DMUs and locomotive-hauled passenger trains.

Formation	DMSL-DMS
Length	22.385m
Width	2.730m
Height	3.805m
Introduced	1987–1989
Wheel Arrangement	2B+B2
Builder	Metro-Cammell
Power	430 kW
Weight	38.8t / 37.9t
Engine	2 × Cummins NT855-R5 (one per vehicle)
Transmission	Voith T 211r (hydrokinetic) (one per vehicle)
Max Speed	75 mph
Wheelbase	16m
Bogies	2.6m
Seats	146-152 (originally 163)

158

Class 158 Express Sprinter

The British Rail Class 158 Express Sprinter is a diesel multiple unit (DMU) passenger train. It is a member of the Sprinter series of regional trains, produced as a replacement for British Rail's first generation of DMUs; of the other members, the Class 159 is almost identical to the Class 158, having been converted from Class 158 to Class 159 in two batches.

Builder	BREL Derby Litchurch Lane
Introduced	1989–1992
Max Speed	90mph
Transmission	Voith T211rz or rrz
Length	22.57m
Width	2.70m
Height	3.73m
Power	350hp / 400hp
Weight	38.5 tonnes
Engine	Cummins NTA855-R1 / Perkins 2006 TW-H / Cummins NTA855-R3
Brakes	Pneumatic (disc)
Seats	Varies

Class 159 South Western Turbo Sprinter

Paul Furse

The British Rail Class 159 is a class of British diesel multiple unit passenger trains of the Sprinter family, built in 1989–1992 by British Rail Engineering Limited (BREL)'s Derby Litchurch Lane Works as Class 158. Before entering traffic, the original 22 units were modified at Rosyth Dockyard to Class 159 to operate services from London Waterloo to Salisbury and Exeter St Davids, replacing various locomotive-hauled passenger trains.

The units were originally branded by Network SouthEast as South Western Turbo.

165

Class 165 Networker Turbo

The British Rail Class 165 Networker Turbo is a fleet of suburban diesel-hydraulic multiple unit passenger trains, originally specified by and built for the British Rail Thames and Chiltern Division of Network SouthEast.

They were built by BREL York Works between 1990 and 1992. An express version was subsequently built in the form of the Class 166 Networker Turbo Express trains. Both classes are now referred to as "Networker Turbos".

Class 166 Networker Turbo

The British Rail Class 166 Networker Turbo is a fleet of diesel-hydraulic multiple unit passenger trains, built by ABB Transportation at their Holgate Road Works in York between

Diesel Unit

1992 and 1993. They were specified by and built for British Rail, the state-owned railway operator in Great Britain at the time.

The trains were designed as a faster, air-conditioned variant of the Class 165 Turbo, intended for longer-distance services, and, like the 165s, belong to the Networker family of trains.

168

Class 168 Clubman

John J Cordrey

The Class 168 Clubman is a British diesel-hydraulic multiple unit passenger train used on Chiltern Line services between London Marylebone and the West Midlands. The trains were built by Adtranz at the Derby Litchurch Lane Works in several batches from 1998.

The first batch was classified 168/0 under TOPS and resembled the Class 165 units previously built by BREL York. The Networker-design cab was an interim solution pending the design of a completely new cab for further Turbostar batches. Subsequent builds, subclassed as 168/1 and 168/2, were constructed at the same time as the Class 170 Turbostar and thus are part of the Turbostar family of trains.

Gauge	1435mm

Paul Furse

AC/DC.

313201-220 DC traction only as used on Southern Route only.

Length	60.83 m (199 ft 6 7/8 in)
Width	2.82 m (9 ft 3 in)
Height	3.58 m (11 ft 9 in)
Introduced	16 August 1976 - onwards
Builder	BREL York Works
Weight	104.5 tonnes (102.8 long tons)
Max Speed	75 mph (121 km/h) 30 mph (48 km/h) GN units on DC
System	25kV AC/750V DC 3rd Rail

Class 319

The British Rail Class 319 is an electric multiple unit passenger train built by British Rail Engineering Limited's Holgate Road carriage works for use on north–south cross-London services. These dual-voltage trains are capable of operating on 25 kV 50 Hz from AC overhead wires or 750 V DC from a third rail.

Built in two batches in 1987–88 and 1990, the units were primarily used on the then-new Thameslink service from Bedford to Brighton and various other destinations south of London. The majority of the fleet remained in use on the Thameslink route after its reshaping and privatisation in 1997. Some of the fleet was also used by Connex South Central and latterly Southern on various services operating out of London Victoria, including flagship expresses to Brighton.

Notes

1: Unveiled on 20th June 2019

2: TESTRB

3: TESTRB

4: TESTRB

Electric Unit

5: TESTRB

6: Formed the first passenger train through the Channel Tunnel 10/12/1993, with 319009

7: Formed the first passenger train through the Channel Tunnel 10/12/1993, with 319008

8: MOD

9: 77340 Is Now At Sims Metals, Newport

320

Built by BREL in York for Scottish services.

Formation	3 cars per unit
System	25kV 50Hz AC Overhead
Introduced	1990
Builder	BREL
Power	900kW
Max Speed	320/3 90mph, 320/4 100mph

Desiro

350107 at Crewe 2025

Dan Cardwell

Siemens Desiro EMUs. ALL class 350s In use with London North Western Railway.

Gauge	1435mm
Builder	Siemens
Max Speed	110mph
System	25kV AC Overhead / 750V DC 3rd Rail (350/1 only)
Introduced	2004–2005
Length	20400mm x4
Width	2796mm
Weight	172.7t
Power	2,000 kW
Bogies	Siemens SGP SF5000

Number	Form	Livery
350101	63761, 66811, 66861, 63711	LNG
350102	63762, 66812, 66862, 63712	LNG

Electrostar

MRG

Electrostar

Built for London Overground network by Bombardier in Derby.

Formation	5 cars per unit
System	750 V DC 3rd rail and 25kV for 378/2
Introduced	2009
Builder	Bombardier
Max Speed	75mph
Seats	1178 total includes fixed seats, tip up and standing
Power	2,400kW

Electrostar

John J Cordrey

Electrostar

Electric Unit

Originally built by Bombardier for use on Stansted Express.

All 30 have now been purchased by Porterbrook and will be used by Great Northern

The units have now started operating on the King's Cross to Letchworth schedule in an 8 car formation.

Formation	4 cars per unit
Introduced	2011
Builder	Bombardier
Max Speed	100mph
System	25kV 50Hz A Overhead
Seats	209
Power	1680kW

Citylink Tram-Train

Derby Litchurch Lane 03.08.25

Phil Hayward

The Class 398 Citylink is a fleet of 36 tram-train multiple units being built for Transport for Wales Rail by Swiss rolling stock manufacturer Stadler Rail. The units will be equipped with traction battery packages, allowing them to operate over non-electrified sections of track in addition to those with 25 kV 50 Hz AC overhead supplies.

When built, Transport for Wales Rail Class 398 units will operate services on the Rhondda, Merthyr and City lines, and the Cardiff Bay Branch.

455

Class 455 EMU

Paul Furse

The British Rail Class 455 is a Mark 3-based electric multiple unit (EMU) passenger train built by BREL. Upon their introduction, they replaced the Class 508s and also the ageing Southern Railway slam-door stock on commuter services out of London Waterloo. They were mostly used in Greater London, Surrey and also by Southern

The Class 455 was originally to be classified as the Class 510, basically a 750 V DC version of the Class 317. However, as the chopper control system at the time was not considered robust enough for the electrically rougher third-rail Southern Region, they were fitted with GEC Traction camshaft-control systems instead, and the Class 510 designation was changed to Class 455.

The class has the same bodyshell as the Class 317 and Class 318, which is based on the MKIII, but with a steel construction as opposed to aluminium alloys like PEP-based classes. As they were designed for inner suburban services, they do not feature first-class seating, air conditioning or toilet facilities, and are restricted to 75 mph.

They are currently being replaced by the Class 701 EMU on the South Western Railway network.

One full unit has been preserved. A significant number have been scrapped.

Formation	DTSO+MSO+TSO+DTSO
System	750 V DC 3rd rail
Introduced	1983
Builder	BREL York
Power	Refurbished 1,000 kW
Max Speed	75mph

Electric Unit

Seats	Refurbished 244 or 307

Notes

1: Numbered 465301 during 1992 when used as a demonstrator for the Networker.

2: 72787, 72799 scrapped 08/2024

3: Name: Remembrance

4: Name: Chris Green

466

Networker

Built by Metro-Cammell. Refurbished between 2011 and 2013.

They can only be used in multiple with Class 465's, this is because they do not meet the current accessibility standards.

Formation	2 cars per unit

Class 614 Hydrogen Prototype Unit

In February 2020, ScotRail announced plans to convert the remaining class 314 unit, 314209, to be powered by on-board hydrogen fuel cells. The initiative is intended to study the feasibility of using hydrogen to fuel trains, as part of ScotRail's commitment to end its use of diesel fuel for traction by 2035.

In September 2020, it was announced that the demonstrator would appear at the COP26 Climate Change Summit, to be held in Glasgow during November 2021. The unit was to operate special services for the benefit of visiting delegates. In advance of the summit the unit was reclassified into the alternative-fuels class number range and renumbered 614209.

An acknowledged limitation of the Class 614 demonstrator is that it can only carry 80kg of hydrogen, pressurised at 350bar. This is sufficient for short-distance operation as a prototype, but storage capacity will need to be significantly increased for normal passenger service to be feasible. The project team claim that it will be possible to achieve this increase by installing additional storage tanks within the vehicles – a necessity as the UK's standard loading gauge does not allow enough space for roof-mounted tanks.

Equipment has since been removed and the unit has been converted to a classroom and training facility at Glasgow works.

Electric Unit

Formation	DMSO-PTSO-DMSO
Length	19.8m
Width	2.82m
Height	3.582m
Introduced	2020
Wheel Arrangement	Bo'Bo'+2'2'+Bo'Bo'
Builder	BREL then Brodie Engineering & Arcola Energy
Max Speed	70mph
Wheelbase	14.17m
Brakes	Electro Pneumatic Discs

Notes

1: ERTMS Test unit

2: Name: Driver Phil Marchant Keeping us moving for more than 12 years

3: has Pride rainbow vinyls on each power car

701

Arterio

701011 stabled at Clapham Yard

Neil Thaler

South Western Railway, ten car and five car Bombardier/Alstom Arterio units.

Introduced into service 2024 and operating Waterloo to Windsor and Reading services.

Based at Feltham and Wimbledon depots

Builder	Alstom Derby
Max Speed	100mph
Introduced	2019–2024
System	750 V DC third rail
Power	4000kW
Seats	556
Brakes	Electro-Pneumatic disc / Rheostatic regenerative.
Formation	DM-(P)M-TLW-M-EM-EM-M-TLW-(P)M-DM
Bogies	Flex B5000

710

AVENTRA

MRG

Class 710 is a development of Bombardier's Aventra electric multiple unit design which are being built for London Overground.

Introduced	2017-2019
Builder	Bombardier Transportation
System	25kV AC 710.1 25kV AC/750V DC 710.2
Wheel Arrangement	Bo-2+2-Bo+Bo-2+2-Bo 4 car Bo-2+2-Bo+Bo-2+2-Bo+2-Bo 5 car
Power	2 x 265kW
Max Speed	75mph

717

For use on GN inner suburban services

Phil Hayward

The Class 717 is an electric multiple unit being constructed for Great Northern by German rolling stock manufacturer Siemens for services from Moorgate, London. A total of 25 six-car units are to be built. They to enter service in September 2018. Replaces Class 313.

Length	121,674 mm (399 ft 2 3/8 in)
Width	2.80 m (9 ft 2 in)
Introduced	2018
Builder	Siemens Mobility
Weight	204 t (201 long tons; 225 short tons)
Max Speed	85 mph (137 km/h)

799

Hydroflex

799001 at Rail Live 2022

Phil Deaves

Prototype Bi-Mode unit, converted from class 319 (units 319001 and 319382)

Retains previous 25kV and 750VDC equipment and with batteries charged by hydrogen power cells.

System	25kV AC / 750V DC 3rd rail / Battery
Introduced	2020
Wheel Arrangement	2-2+Bo-Bo+2-2+2-2
Max Speed	75mph

Number	Name	Form	Base	Livery
799001	Driver Mick Winnett**	X 77291, 62891, 71772, 77290		HFX
799201		S 77975, 63094, 71980, 77976	Quinton Rail Technology Centre, Long Marston	HFX

800

Bi-Mode units

Bi-Mode units for Great Western mainline and Virgin East Coast.

5 car and 9 car sets

Azuma Class

Introduced	2017
Builder	Hitachi

Bi-Mode Aurora

13/5/2025 - Melton RIDC

Dan Cardwell

Class 810 Bi-Mode units under construction for East Midlands Railway.

The British Rail Class 810 Aurora is a type of bi-mode multiple unit which will be built by Hitachi for East Midlands Railway. Based on the Hitachi AT300 design, 33 five-car units are to be built to replace Class 180s and Class 222s on EMR's intercity routes.

System	25kV 50Hz AC

820

Class 820 Tri-Mode units

The British Rail Class 820 is a type of tri-mode multiple unit to be manufactured by Hitachi Rail for Grand Central. Based on the Hitachi A-train design, 9 five-car units will be built, powered by 25 kV 50 Hz electrification, as well as battery and diesel power.

895

Class 895 Zefiro

The Class 895 is a type of EMU on order for the under-construction HS2 high-speed rail line.

The trains will be based on an evolution of the Zefiro V300 platform and able to run at the top operational speed of 225 mph on the HS2 line.

In March 2026, the UK government opened discussions with the joint venture to revise the

Electric Unit

contract after the cancellation of HS2 beyond Birmingham raised questions about the number and length of trains required for the network.

System	25kV 50Hz AC Overhead
Builder	Joint venture between Hitachi Rail & Alstom
Max Speed	225mph
Seats	504

897

Class 897 Serenza

The British Rail Class 897 Serenza is a type of tri-mode electro-diesel multiple unit to be manufactured by CAF for LNER based on the Class 397 Civity EMU. Ten 10-car units will be built, powered by 25 kV 50 Hz overhead electric, battery and diesel power in order to replace the remaining Intercity 225 sets.

LNER plans to brand the fleet as Serenza, a portmanteau of the word "Serene" and the "Spanish-style suffix '-enza'".

System	25kV 50Hz AC Overhead
Builder	CAF
Seats	569
